# Using the Info Summary widget

Click the Info Summary widget icon to open it. The widget displays on the right side of the map.

All configured layers are turned on by default and those with clustering enabled will display as clusters.

Click layer icons to toggle the layers off and on.

Click a layer on the widget panel to expand the list of features within the current map extent. If the layer is grouped by a specified field, use the arrow to expand it, showing a list of features within the selected group.

Pan and zoom around the map to update the feature counts on the widget panel.

Click the Info Summary widget or the X in the upper right corner of the widget to close it. When the widget closes, the cluster layers will remain visible. To turn the clusters off, uncheck them in the Layer List widget.
